// MAIN FEATURES

- Wireless data logger with 4-20mA current loop inputs (4 channels)
- Integrated Lithium-thionyl chloride primary cell 6,5Ah
- Wireless transmission IEEE 802.15.4 with antenna diversity
- Embedded data logger up to 1million data points
- Integrated sensor power supply, software configurable 4.5V to 20V
- Extended operating temperature range : -40°C to +85°C

//EMBEDDED DATA LOGGER UP TO 1 MILLION DATA POINTS

The BeanDevice® AN-mV Xtender integrates an embedded data logger, which can be used to log data when a Wireless Sensor Networks can not be easily deployed on your site. All the data acquisitions are stored on the embedded flash and then transmitted to the BeanGateway® whenever a Wireless Sensor Network is established.
The Datalogger function is compatible with all the data acquisition mode available on your BeanDevice® AN-mV Xtender :

- LowDutyCycle Data Acquisition
- Survey

EXAMPLE : DATA ACQUISITION SYSTEM ON WATER TREATMENT PLANT

- The BeanDevice® AN-mV Xtender is configured with its Datalogger feature. A standalone installation of the BeanDevice® AN-mV Xtender will be done (mounted on the walls), without the necessity for any connection to the BeanGateway®.
- Once the sensors are connected, each data is recorded on the embedded flash.
- When needed a technician working on the site can send a request for a log transmission. Then the BeanDevice® AN-mV Xtender starts sending all its logs. If all the logs are sucessfully transmitted to the BeanGateway®, the flash memory is erased and new logs will be recorded.

For further informations about the Datalogger, please read the following technical note :

// REMOTE CONFIGURATION & MONITORING

BeanScape® Basic

The BeanScape® application allows the user to view all the data measurements transmitted by the BeanDevice® AN-mV Xtender.
With the OTAC (Over-the-Air configuration) feature, the user can remotely configure the BeanDevice® AN-mV Xtender.

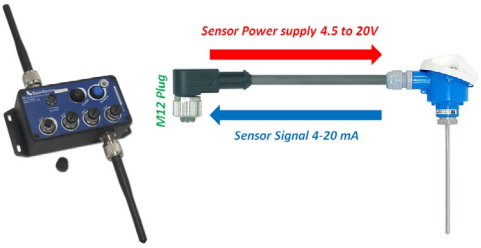
SEVERAL DATA ACQUISITION MODES ARE AVAILABLE ON THE BEANDEVICE® AN-MV XTENDER :

- Low Duty Cycle Data Acquisition mode (LDCDA) : the data acquisition is immediately transmitted by radio. The transmission frequency can be configured from 1s to 24h.
- Survey Mode : the measured value is transmitted by radio whenever an alarm threshold (fixed by the user) is detected (4 alarms threshold levels High/Low). Meanwhile, the device sends frequently a beacon frame informing its current status.

BeanScape ® Premium+ Add-on
The BeanScape® Premium+ integrates an OPC DA server (Data Access). OPC DA is particularly well suited for real time measurement and data sharing. Each data/measurement can be associated to a tag or its attributes and shared with one or many OPC clients.

For further informations about the data acquisition modes, please read the following technical note :
TN_RF_008 – "Data acquisition modes available on the BeanDevice®"

//CONFIGURABLE SENSOR POWER SUPPLY



The sensor is directly powered by a high accuracy and adjustable DC/DC converter integrated inside the device. The excitation voltage is remotely configurable through the BeanScape® (4.5 to 20V).

//EASY BATTERY MAINTENANCE

Fully designed for an easy battery maintenance, BeanDevice® AN-mV Xtender integrates a battery holder which is sealed to IP67, extending the applications into harsher external environments where dust or water would inhibit equipment operation.
